Summary

Backend .NET Developer with hands-on experience in building backend applications using **ASP.NET Core**, **Entity Framework Core**, and **SQL Server**. Skilled in developing **RESTful APIs**, designing database solutions, and applying **Clean Architecture** and **SOLID** principles to create scalable and maintainable systems. Experienced in working with **JWT Authentication**, **Git**, and modern development practices through professional training, real-world projects, and collaborative development environments. Passionate about **solving complex problems** and continuously improving software **quality** through clean, **efficient code**.

Skills

Backend: C#, .NET 8, ASP.NET Core, Web API, REST APIs, Entity Framework Core, LINQ, Dependency Injection, SignalR, JWT Authentication

Database: SQL Server, Query Optimization, Stored Procedures, Indexing

Frontend: Angular, TypeScript

Architecture: OOP, SOLID Principles, Clean Architecture

Tools: Git, Visual Studio, Postman

Experience

Backend .NET Developer (Full Time)

Des 2025 – July 2026

Orman Association – Egypt

- Developed and maintained **12+ RESTful APIs** using ASP.NET Core to support internal systems and business operations.
- Implemented **9+ new features** and enhancements based on business and user requirements.
- Worked with **Entity Framework Core** and SQL Server to manage and optimize application data.
- Improved database performance by refining queries, stored procedures, and execution plans.
- Resolved **16+ bugs** and technical issues, contributing to improved system **stability and performance**.
- Participated in **SQL database** design and schema updates to support new business requirements.
- Collaborated with team members throughout development, testing, and deployment phases.
- Applied **Clean Architecture** principles, **Dependency Injection**, and SOLID design practices in backend development.
- Used Git for version control, branch management, and collaborative development.
- Contributed to **production deployments** and post-release support activities.

Full Stack .NET & Angular (Internship)

Aug 2025 – Nov 2025

ATOS – Egypt

- Completed a 3-month intensive internship focused on **ASP.NET Core**, Entity Framework, and **Angular**, solving practical development tasks and technical assignments.
- Developed **RESTful Web APIs** using ASP.NET Core (.NET 8) with **JWT authentication** and role-based authorization.
- Applied Dependency Injection and **Clean Architecture** principles and **logging and global exception handling** in backend development.

Projects

Salam – Citizen Safety Monitoring System (In Progress)

[GitHub Link](#)

- Developing a scalable backend system using ASP.NET Core and Clean Architecture.
- Designing RESTful APIs for incident reporting, user management, and safety monitoring workflows.
- Implementing JWT Authentication, role-based authorization, validation, logging, and exception handling.
- Applying pagination, filtering, and database optimization techniques to improve system performance.
- Following Git-based collaborative development and code review practices.

VitaFit (Fitness Wellness App)

[GitHub Link](#)

- Developed a scalable backend system using **ASP.NET Core** and **Clean Architecture**, implementing **15+ RESTful API endpoints** for user management, fitness tracking, and wellness features.
- Designed and integrated **8+ database entities and relationships** using **Entity Framework Core** and database normalization principles to ensure maintainability and data integrity.
- Implemented centralized **logging**, **global exception handling**, and input validation, reducing code duplication and improving application reliability.
- Applied **SOLID principles**, **Dependency Injection**, and layered architecture to create a modular and scalable codebase suitable for future feature expansion.

NoVea Library Management System (Atos Internship Project)

[GitHub Link](#)

- Built a **full-stack** web application using **Angular** and **ASP.NET Core**.
- Implemented CRUD operations, **JWT authentication**, and role-based access control.

E-Commerce Website

[GitHub Link](#)

- Developed a **full-stack** Angular.NET e-commerce platform with product management, cart, and checkout functionality.
- Integrated **SQL Server** via Entity Framework Core and built a responsive frontend using **Angular**.

Education

Bachelor of Computer Science and Information Technology – Fayoum University Sep 2021 – Jun 2025
Grade: Very Good

Scholarships & Training

ITI Backend Training – ASP.NET Core, Entity Framework , SQL Server

DEBI Scholarship (MCIT) – Full Stack development training with hands-on projects and practical application.
